CASTERS—Strong, Durable, Economical

"TRUKASTER"

Get more and better service from your trucks by equipping them with Hamilton Casters—the strongest, smoothest running and longest wearing casters on the market.

Kwality Kasters (single wheel) made in wheel diameters from 2¼" to 12" and in weights of from 2¼ to 82½ lbs. each. Strong, durable, easy swiveling, single wheel caster, steel machined roller bearings with spacer.

Trukasters (double-wheel) made in wheel diameters of from 3" to 7" and in capacities of from 2500 to 7500 lbs. per set. Anti-friction, double wheel caster, with extra heavy plates for long, hard wear.

Ask about the "ECONOMIC," the last word in caster construction.

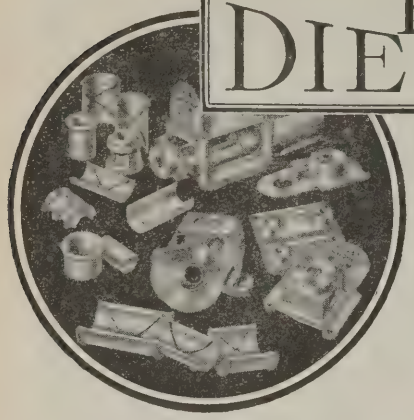
is a Charter Member of the



Associated Business Directory Publishers

affiliated with the Associated Advertising Clubs of the World

The aims of the Associated Business Directory Publishers are to further the best interests of and to protect advertisers in, users of and publishers of Reference Mediums used as Buying Guides. Advertisers prefer to do business with members of the A. B. D. P., each of whom has subscribed to the following Standards of Practice:

1. To consider, first, the interest of the user of the book.
2. To subscribe to and work for truth, honesty and accuracy in all departments.
3. To avoid confusing duplication of listings, endeavoring to classify every concern under such headings as best describe it, and to treat additional listings as advertising, to be charged for at regular rates.
4. To increase public knowledge of what directories and reference media contain; to study public needs and make directories and reference media to supply them; to revise and standardize methods and classifications so that what is wanted may be most easily found, and the directory and reference media be made to serve their fullest use as business and social reference books and directories of buyer to seller and seller to his market.
5. To decline any advertisement which has a tendency to mislead or which does not conform to business integrity.
6. To solicit subscriptions and advertising solely upon the merits of the publication.
7. To avoid misrepresentation by statement or inference regarding circulation, placing the test of reference publicity upon its accessibility to seekers as well as on the number of copies circulated.
8. To co-operate with approved organizations and individuals engaged in creative advertising work.
9. To avoid unfair competition.
10. To determine what is the highest and largest function of directories and reference media in public service and then to strive in every legitimate way to promote that function.

FRANKLIN DIE-CASTINGS

IN ORDER to assist in determining the practicability of the die-casting process for the production of various parts required in your product, we are giving herewith such information regarding limits, materials, etc., as we feel has a vital bearing on the subject. Our engineers are always ready to supplement this information with any further assistance which can be rendered in connection with individual needs.

(A) *Limits — Maximum Weights for Castings.*

Aluminum—3 pounds.
Tin Base—8 pounds.
Lead Base—10 pounds.
Zinc Base—6 pounds.

(B) *Limits—Minimum Wall Thickness.*

Lead—1-32 inch.
Tin—1-32 inch.
Zinc—1-8 inch (for small castings—1-16 inch).
Aluminum—1-8 inch (for small castings—1-16 inch).

(C) *Possible Variations from Drawing Dimensions. Per inch of diameter or length.*

Lead .....plus or minus .001
Tin .....plus or minus .0005
Zinc .....plus or minus .001
Aluminum .....plus or minus .0025

Where the distance involved is several inches, these limits may sometimes be reduced.

(D) *Maximum Number of Threads.*

Lead, external.....24 per inch
Zinc, external.....30 per inch
Tin, external.....34 per inch
Aluminum, external.....20 per inch

In the case of aluminum, where close fit is required, thread should be cast oversize and chased.

Where economical, internal threads may be cast in parts made from zinc, tin or lead base alloys, but this is not possible in parts made of aluminum.

(E) *Holes.*

Lead, Tin, Zinc—1-32 inch minimum.

Regulated by depth of hole and thickness of casting.

Aluminum—3-32 inch minimum.

Size of hole is dependent on its length and the general design of castings. Holes not cast can usually be spotted to facilitate drilling.

(F) *Draft.*

Lead and Tin—Cores, .0005 per inch of length and diameter. Side walls, .001 per inch.
Zinc—Cores, .001 per inch of length and diameter. Side walls, .001 per inch.
Aluminum—Cores, .015 per inch of diameter and length. Cores less than ¼ inch diameter to have .005 per inch of length and diameter. Side walls, .005 per inch.

While the above draft is desirable, it is sometimes possible to modify these limits where they would interfere with the service required.

The following formulas are in general use by us. These, however, may be modified to meet the special requirements of each customer:

(A) *Zinc Base Alloys.*

	No. 8	No. 53*
Tin	6 %	None
Copper	3½%	3%
Aluminum	1¼%	5%
Zinc	89¼%	92%

*Horsehead spelter or its equivalent is used in this alloy.

These are most frequently used as substitutes for cast iron, but may sometimes be substituted for brass and steel, especially where inserts can be used at points subject to special strain or wear.

(B) *Babbitts or Tin Base Metals.*

	SAE 11	"S"	"B"	HGB
Tin	87%	84%	81½%	78½%
Antimony	7%	9%	13¾%	13¼%
Copper	6%	7%	4¾%	4¼%
Lead				4 %

These are used chiefly for bearings in automobile engines, compressors and other machines requiring a high-class bearing, also for parts requiring special acid-proof quality, such as soda fountain pumps, etc.

(C) *High Lead Babbitts.*

	SAE 12	No. 48	No. 17	No. 15	SAE 13
Lead	25 %	42 %	67½%	75%	84½%
Tin	61½%	48 %	17 %	15%	5 %
Antimony	10½%	8½%	15 %	10%	10 %
Copper	3 %	1½%	00½%	00%	00½%

These are chiefly used for bearings where the working conditions are not such as to demand one of the high tin alloys.

(D) *Aluminum.*

For the production of our aluminum castings, various grades of aluminum alloys can be used. In their selection we are guided by the conditions to be met, such as wall thickness, bearing requirements, hardness, etc. Fusing point of these alloys is approximately 1,150 degrees. The tensile strength will vary from 25,000 to 27,000 lbs., but may in some alloys be increased by heat treating.

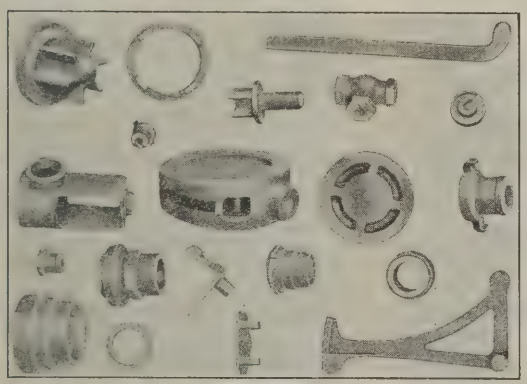
MANNING, MAXWELL & MOORE, Inc. M·M·M CASTINGS

A HEAT AND CHEMICAL RESISTANT METAL FOR CASTING



Special Electric Furnace from which we cast

MODIFIED MONEL METAL—a product of our own foundry made from the Monel Metal produced by the International Nickel Company.

M·M·M

Particular characteristics of this MODIFIED MONEL METAL are:

VARIOUS M·M·M CASTINGS

1st Its resistance to the erosive action of high pressure superheated steam.

2nd Its non-corrosive properties when exposed to hot oils and to most chemicals such as sea water, sulphuric acid and dye baths.

3rd Its physical properties at high temperatures. At room temperatures, its tensile strength is approximately 70,000 lbs. per square inch. At 600 to 900 degrees F. it retains considerably more than three-quarters of this value.

PRICES UPON APPLICATION

Advise us of your needs and try a sample casting

or write for Catalog M

While the above properties make Monel Metal particularly valuable for use under exposure to heat or chemicals, Monel is one of the most difficult metals to cast successfully. This is due to lack of fluidity at pouring and to a discouraging prevalence of porosity and other defects, particularly in the more difficult patterns.

In our MODIFIED MONEL METAL, however, an improved mixture and improved foundry technique has removed these objections without sacrificing any of the characteristic properties. "M-M-M" flows readily and cleanly into the most difficult shapes and reduces the percentage of failure to a figure truly remarkable. Again we suggest that you try a sample casting or write for Catalog M. Our service is at your command.

DIAMOND
Chains and Sprockets
For Transmission of Power

Diamond chains provide positive, flexible, efficient drives for machinery, covering wide ranges of speeds and loads. Some models will transmit as high as 125 H.P. at 330 R.P.M. or less and others will transmit light loads at speeds as high as 3800 R.P.M. They are designed according to approved standards and are interchangeable with different makes of chains over the same sprockets.

Diamond sprockets, made in a variety of types and sizes, are accurately cut to conform to the American Standard Sprocket Tooth Form.

The services of our experienced engineers are offered for the solution of any of your transmission problems. Send your specifications and our recommendations will be promptly submitted. Catalog and data sheets sent on request.

MORSE
SILENT CHAIN DRIVES

Used in all industries for transmitting power from ¼ to 5000 H.P. Chain speeds up to 1200 to 1600 ft. per min., sprocket speeds from 250 to 6000 R.P.M. Sprocket centers any reasonable distance, —usually from 12 to 120 in. Advantages are positive speed ratio, 98.6% to 99% constant efficiency, quiet operation at all speeds, any convenient distance between sprocket centers, little lubrication at infrequent intervals, unaffected by heat, cold, or moisture, long life, low up-keep cost.

Donley Brick Clamp and Tile Hook

Two Excellent Time and Labor Savers

The Brick Clamp handles eight or more brick at one time without injuring brick or hands. Easily adjusted to desired number of bricks. Saves cost in short time. A favorite with labor.

The Tile Hook picks up one or two at a time. Can be used in both hands simultaneously, thereby saving time and possible injury to hands. Speeds up operations.

Send for details and Donley Catalog.

DETEX
Watchclock Systems
"The World's Best"

DETEX PATROL This is the most flexible of all watchclock systems. It expands with the growing plant, without any change in the units already installed. The recording mechanism is in the station. The clock is always the same size and weight, regardless of the number of stations recorded. The choice of many of the country's largest watchlock users.

DETEX
Watchclock Systems
"The World's Best"

DETEX ECO This is the most accurate of all watchclock systems. If it is important to have an extremely exact record of a watchman's movements, this is the system we recommend, as it registers practically *to the minute*. It is an excellent system in every respect. The style of key and the principle of the recording mechanism preclude the possibility of falsifying records.

DETEX
Watchclock Systems
"The World's Best"

DETEX
NEWMAN The oldest and best known of all American watchclocks. More of them are in use than all others combined. Records an individual character for each station and is fool and tamper proof. A thoroughly dependable, durable system, endorsed by thousands of users in every part of the world.

The Cleveland Clutch

A powerful, simple and dependable clutch, unaffected by dust or moisture, giving long service under all conditions where a clutch is adaptable. It is particularly adapted for use in all types of special machines where safety and appearance are important factors

Construction: This clutch consists of a combined clutch casing and sleeve which rides free upon the shaft and upon which the pulley, gear, sheave or similar member is fixed. Within the casing is an expanding ring making frictional contact with the inner peripheral surface of the casing. Located within the ring is the mechanism for expanding the ring, consisting of two floating fingers and floating pins, and a driving member keyed to the shaft. Other parts consist of a casing cover and a hardened cone shaped sleeve fitting loosely on the shaft and projecting through the cover so that contact can be made between it and the fingers by means of a shifter yoke, handwheel or other suitable means.

The cut-off coupling is similar except that the casing is keyed to one shaft and the driving member to the other.

Operation: The insertion of the cone actuates the floating fingers, thereby expanding the ring until the inner periphery of the casing and the outer surface of the ring are in complete contact. Opposite the finger opening is the driving arm actuating the ring by means of a floating key whose beveled sides cause a wedging action to occur under torque. This, combined with the spreading action of the fingers between the ends of the ring insures a complete contact over the entire friction surface.

Advantages: (1) Detachable pulley type. (2) Takes hold gradually, oil film cushion, releases instantly and positively. (3) Sleeve lubricated from oil in casing. (4) No exposed parts, no small or delicate parts. (5) Easily adjusted. (6) Safety to employees. (7) Not affected by dust or moisture. (8) The greater the torque, the tighter the clutch holds.

SERVICE: We are always pleased to assist your engineering department in the selection of the correct clutch. To aid us, when making an inquiry, give size of shaft, horsepower required (the maximum load transmitted through clutch), kind of service, r.p.m., kind of power and any other information which would affect operations of clutch.

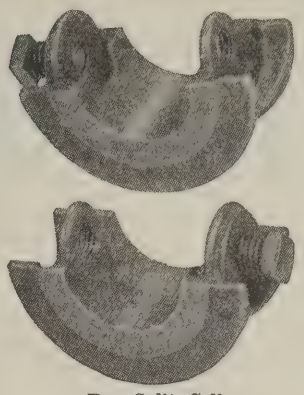
REX *Certified Malleable* SET COLLARS



Do not Break

Rex Solid Collar

Rex Set Collars can be hammered or dropped to the floor without danger of breaking. They are not only stronger but also lighter in weight and better in appearance than ordinary collars. Yet they cost no more. Rex couplings, bearings, take-ups and hangers are of similar high quality with no increase in price.

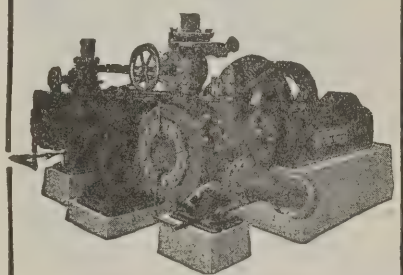
I-R COMPRESSORS

Air, Gas and Ammonia



Ingersoll-Rand Company build air and gas compressors for any pressure or requirement—capacities range from 3 to over 10,000 cubic feet per minute. You can secure the

I-R Duplex Belt Driven Air Compressor Short Belted to electric motor.

type of drive which best meets your particular requirements—long belt or short belt; steam; direct-connected electric motor or direct-connected oil or gas engine drive.

Air and Gas Compressors are double-acting, for single, two or more stage compression. Compressing cylinders are fitted with highly efficient Ingersoll-Rand Plate Valves having large areas and liberal, unrestricted passages. Regulation and lubrication is entirely automatic.

I-R Duplex Direct-Connected Ammonia Compressor.

Ammonia Compressors are built for Ice Making and Freezer Cold Storage Service. Sizes range from 1½ to 800 tons refrigeration capacity. These compressors can also be furnished for long belt or short belt; steam; direct-connected electric motor; or direct-connected oil or gas engine drive.

I-R Turbo Blowers and Compressors are built for capacities from 3,000 to 80,000 cubic feet per minute at pressures from 1 pound to 110 pounds per square inch.

American Triangle Mesh and Electric Weld Reinforcing Fabrics

Wire fabric reinforcement for concrete roads ensures permanence

There is no form of road that is as economical, enduring and efficient as a concrete road. And when it is reinforced with steel wire fabric it is practically good for all time if the foundation and mixture is right.

I-R CONDENSERS

Surface, Barometric and Jet

I-R Surface Condensers are of highly improved design and have many important features not found in other condensers of this type. The I-R Condensers have greatly reduced tube surface. Elimination of waste tubes is secured by arranging tubes in stages and by the use of a separate devaporizer or cooler.

In addition to Surface Condenser the company's line includes such types as the Barometric and Low Level Multi-Jet, together with Steam Jet Vacuum Pumps.

FOXBORO
REG. U. S. PAT. OFF.

Automatic Recorder—Controllers

For Temperature For Pressure For Humidity

A new design in which the functions of two instruments—Thermometer and Controller: Psychrometer and Controller—have been combined and so co-ordinated that perfect synchronization is obtained. *The use of only one bulb to actuate both the recorder and the controller elements gives an accurate record of the controller operation.* Valves designed to operate on either pressure or vacuum. An improved form of rubber diaphragm motor is employed, which is so designed that, even under severe conditions, no undue stresses are set up in the diaphragm itself.

BROWNHOIST

Conveyors, Elevators and Crushers

Brownhoist Conveyors and Elevators are built in types to suit every handling condition. There are belt conveyors, chain conveyors, apron conveyors, pivoted bucket carriers, chain or belt elevators, etc. All designed and constructed by Brownhoist to give years of efficient and economical service.

The feature of the Brownhoist belt conveyor is the idler, designed to give perfect alignment permanently.

Chain conveyors are built with either Brownhoist drop-forged or malleable iron chain.

Our engineering staff will gladly assist you in the selection of the most suitable equipment for your needs.

REX CONVEYORS

Rex Conveyors are made for every conceivable use in the handling of materials. Many of them are standard in design. Others are engineered to fit specific cases. Whatever your problem in conveying may be there is a Rex Conveyor or Elevator to do the work cheaply and efficiently. Following are some of the commodities for which Rex Conveyors are being used:—

Coal and Ashes	Fertilizer
Sand and Gravel	Packages, Boxes and Barrels
Lumber	Food Products
Cement	Automobiles in process

FALK

BIBBY COUPLINGS

FALK-Bibby Flexible Couplings are the natural complement of Falk Herringbone Gears (see classification Gears, Herringbone); they are precision made, self-lubricated and with all of the usual characteristics of the best types of coupling, they combine the exclusive feature of **"controlled torsional elasticity."**

They are truly flexible, not only under normal, but even under light loads and will stand far greater momentary or constant overloads than any other type in existence.

Their range of application includes the entire field where herringbone gears are used and also every case where two approximately co-axial shafts need to be coupled for the transmission of power from one to the other.

The standard sizes which have been developed range from 4½ to 8600 H.P. at 100 R.P.M. Large couplings, and couplings for special duty, are treated on their individual merits, and can be kept within convenient dimensions.

For easy coupling and uncoupling of shafts—for the correction of misalignment evils—for the elimination of end-thrusts, oscillations, wear and power losses—we unreservedly recommend these couplings and invite requests for further information.

BYERS CRANES

Byers "Bear Cat" with clamshell bucket.

The "Bear Cat" is a whirlwind at a trench job with this ditcher.

With skimmer attachment, an effective tool for road grading, etc.

The All-Around Light Crane Is Byers "Bear Cat"

This wonderful little crane often does the work of much larger and heavier machines, just as fast and much more economically. Mounted on full "cats," it has traction and stability on all kinds of ground.

The "Bear Cat" is a very effective tool for handling dirt and loose materials of various kinds, ditching, excavating, grading, etc. Seven different attachments provided, interchangeable at will. Besides clamshell, ditcher and skimmer, illustrated here, it handles a shovel, dragline, backfiller, and magnet. A very strongly built machine with plenty of endurance and power.

Buyers Truckrane is a similar crane furnished unmounted for use on a motor truck chassis where traveling speed is required.

Standard Traveling Cranes

Over 7,500 P & H Electric Traveling Cranes have been put in service since the establishment of this company in 1884. They are built for every material handling service—for every type of industrial plant, railroad shop or yard, shipyard, mine, quarry, etc.

They are made for operation by D. C. or A. C. motors in varying spans and capacities.

Hoist Installations

For moderate speed standard service the type "U" hoist built in capacities of from ½ to 6 tons can be applied in any industry. For high speed heavy duty the type "O" hoist can be furnished in capacities up to 5 tons. For the lumber industry the P & H Cranes and Hoists for handling lumber units of from 2,000 to 3,000 board feet have been in successful use for 14 years. Grab Bucket Cranes and Hoists in various capacities for handling coal and other loose materials.

P & H Hoists are made in several types— ½-ton and up

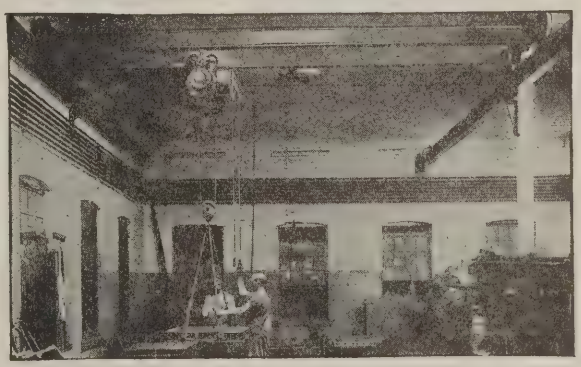
TRAVELING CRANES



Shepard Trolley

THE Shepard *Balanced Drive*, enclosed unit construction, permanent alignment, and thorough automatic oil bath lubrication are features that contribute to the *assured service* of Shepard Electric Traveling Cranes.

Years of Crane Service

INHERENTLY sound in design and construction, Shepard Electric Traveling Cranes assure what you most desire — SERVICE. Back of each crane is a great organization of electric crane and hoist builders with many, many years of successful manufacturing in this line. Capacities 1 to 30 tons.

SINGLE I-BEAM CRANES

MAKES accessible every square foot of a bay, side balcony, or floor. Ideal for plants with limited headroom, or as an auxiliary to an electric traveling crane.

Shepard also builds:

ELECTRIC Hoists, in capacities from ¼ to 10 tons, Cupola Chargers, Transfer Cranes, Jib and Bracket Cranes, Complete Monorail Systems, Back Geared Electric Motors and Electric Winches. Our engineers are at your service with no obligation on your part.

Since 1891 the name "SHAW" upon a crane has represented the highest standards in fetch-and-carry service with a minimum of fetch-and-carry costs. The first SHAW Cranes built are still giving full service and more than 4,200 SHAW installations have been made in all parts of the world. Possessing those hidden qualities which, though unseen, make possible superlatively good, superlatively safe and permanently sustained crane service, we believe that the SHAW Crane is the best crane built. Each crane is constructed as an individual "contracting engineering job" designed and built to meet the individual transportation conditions in each plant or yard. Our Engineering Staff is peculiarly fitted to develop cranes for special purposes. Their advice is at your disposal.

BROWNHOIST

Locomotive Cranes

Thousands of owners, in all parts of the world, have found Brownhoist cranes to be fast, safe and economical in operation.

The stock models of Brownhoist Locomotive cranes include types and sizes for every conceivable purpose. They range from small cranes with a rated capacity of 5 tons to large heavy duty types of 40 tons capacity. There are steam, gas engine or electric drives mounted on railroad trucks, road wheels or creeper trucks.

Operating with hook, magnet, bucket, shovel or pile driving attachment a crane will soon effect a remarkable saving in material handling costs.

Catalog K shows some of the many uses of Brownhoist cranes. Write for it.

THE GRUENDLER SWING HAMMER PULVERIZER

Mfrs. Crushers, Pulverizers, Shredders and Grinders

FOR ALL PURPOSES

The illustration to the left shows the Pulverizer in actual operation. The rock enters the throat or hopper of the grinder and is crushed against heavy armour plates. It is further pulverized against the grate bars to a finished product, any large rock not pulverized is finished on the hard steel breaker plates above. A very simple method with few parts.

Gruendler Crushers of later types are equipped with adjustable breaker plate and hammers. When hammers become worn they can be adjusted more closely to the grate and kept at any crushing distance desired. This feature assures uniformly sized product at all times. Patented dumping bottom makes possible the cleaning or removing of foreign material easily and quickly while crusher is running.

Write us for further information. Our Engineering Department will be glad to go into full detail concerning production problems, floor space, horsepower, etc.—we will also submit specifications on any machine desired.

(Continued on following page)

Type "B" Rigid Hammer Crusher. Fine uniform product with minimum of fines. Screen Bars accurately regulate size of product. Is especially adapted for reducing coal to sizes smaller than can be obtained with the Jeffrey Single Roll Crusher, or any toothed roll crusher.

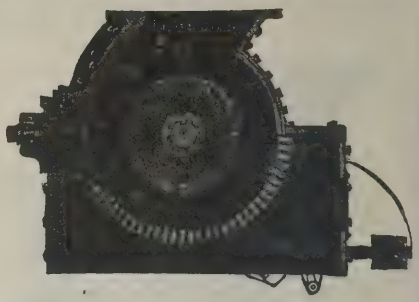
Patented

Single Roll Crusher for reducing Coal, Salt, Alum, Bone, etc.

JEFFREY

CRUSHERS AND PULVERIZERS

Built in several types and in various sizes, with wide range of capacities and products such as Limestone, Shale, Gypsum, Marl, Barytes, Clay, Fertilizer Materials, Coal, Coke and other friable materials.



Auxiliary Jeffrey Standard Conveyors, Elevators and Drive Chains can also be readily arranged to form complete grinding and handling units.

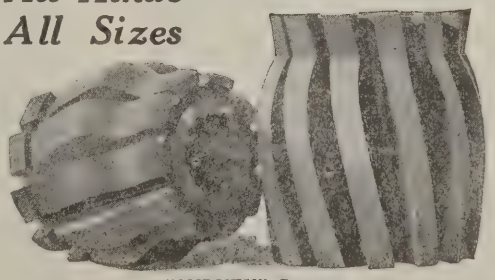
MILLING CUTTERS

YOU'LL get better production if you use P. & W. Milling Cutters.



We make all the usual styles and sizes and will make special cutters for special work if you require them.

Where a form is to be milled, we suggest the use of our new "Curvex Cutters"—spiral fluted and eccentrically relieved—which allows the use of a maximum feed to increase production on form milling from 50 to 100 per cent. Catalogue No. 11.

We make Small Tools of all kinds, in all sizes, for every purpose
